

Project Brief: The "Billion Dollar Club" Dashboard

Objective

Design a strategic executive dashboard to analyze the global landscape of "Unicorn" companies (startups valued over \$1 billion). The dashboard must empower Senior Investors to identify market trends, geographic hubs, and capital efficiency.

Target Audience

Senior Partners & Venture Capitalists (VCs).

Data Source

Download the file in Google Classroom. The file is named **Unicorn_Companies.csv**

Part 1: The Executive Summary (KPIs)

The dashboard must answer these four "Big Number" questions instantly:

"What is the total value of our potential market?"

Metric: Total Market Cap (Sum of Valuation)

"How many opportunities (companies) are there currently?"

Metric: Unicorn Count (Count of Companies)

"What is the average price tag of a deal?"

Metric: Average Valuation

"How fast do these companies typically scale?"

Metric: Average Years to Unicorn Status

Part 2: The Strategic Questions (Visuals)

The dashboard must visualize the answers to these four strategic questions:

"Are we in a startup boom or a bust?"

Requirement: Visualize the history of new unicorns joining the club each year to show the trend.

"Which industries are creating the most massive wealth?"

Requirement: Rank the industries (e.g., Fintech, AI) by their total valuation and show the top 4 industries to see where the money is concentrated.

"Where are the global hotspots for innovation?"

Requirement: Map the valuation by country to identify the geographic centers of power.

"Who is efficient with capital, and who is just burning cash?"

Requirement: Analyze the relationship between Funding Raised vs. Current Valuation to spot the most efficient companies.

Part 3: The Interactive Capability (Filters)

The user must be able to "slice" the entire report to answer:

"Can I see all of the above insights specifically for Industry or Continent?"

Requirement: Interactive slicers for Industry (e.g., Artificial Intelligence) and Continent (e.g., Asia, North America).

Deliverables

- Save your Power BI file using the format:
FirstName_LastName_PBI_Project.pbix
 - Submit the **.pbix file** to Google Classroom.
 - Publish your dashboard to Power BI Service and submit the **link to the published report** on Google Classroom.
-
